

Managing Keys for Defence Estates, Vehicles, Equipment, and at the same time helping to protect your people to!

Issues with managing keys - what are the security implications if lost? Downtime and lost productivity, as well as the replacement costs and administration time are just some of the overheads that would likely be incurred. Traka supplies a proven solution – in use worldwide by Governments, Police, Prisons, Commercial Estate Managers, Fleet Managers, Distribution Centres, Docks and Airports.

Winner of a recent Health & Safety in the Environment Award by Manufacturing & Industry, Traka has a range of Electronic Key Management solutions that will control who can gain access to keys, restrict individual key usage to authorised users, provide a full audit of key activity and generate numerous easy to use reports based on user information logged at the time of taking or returning keys.

- Cabinets managing between 10 and 180 keys, in 3 modular sizes
- Multiple cabinets can be networked, locally or remotely, for large sites with more keys
- User profiles and key details configured in a centrally located database on a standard PC

Key

Clever key

**Why Traka solutions are used to manage in
the enterprise – it's a thought provoking read!**

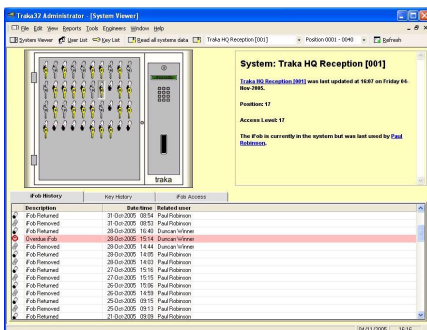

Traka 'clever key' solutions are used in organisations across a wide range of market sectors. Some businesses want to manage their keys better for security reasons, others want to ensure Health and Safety compliance and Duty of Care in the Workplace; many organisations significantly reduce costs by cutting down on administration time or improving shift start-up times with keys always available 24/7. It's not uncommon for clients to make comments like ... "We were able to redeploy 4 staff immediately and save thousands of pounds in vehicle administration in the first year", or comments such as "the sense of ownership Traka has introduced, knowing every key is traceable, has cut our incident damage bills by £2,500 per quarter". Quite impressive for systems that can cost from as little as £5,000 to install and configure.

What distinguishes a Traka solution?

Individual keys can be set with a curfew, raising an alarm if not returned on time, or restricted time access can be set so as to manage usage, perhaps for cleaners or service staff. Keys can be pre-booked perhaps for reserving a vehicle, due to be taken for service. User information can be defined, such as license (or qualification) expiry date, so keys are automatically made unavailable to the driver after this date. Specific information can be recorded when keys are returned; such as mileage and faults or defects, where repairs are needed. Keys managing vehicles with dangerous faults reported, or keys managing equipment reported broken, can immediately be locked-out so they are unavailable to anyone other than a service engineer. Alerts via SMS or email can automatically be issued to managers or supervisors, warning about a fault or bringing it to the attention of the workshop team.

- Systems configurable giving multi-user access to one or more keys, each with their own parameters
- Unique time access controls for different user groups; for shift patterns, curfew limits or restrictions
- User license or qualification expiry dates configured to prevent users gaining unauthorised key access
- Key booking options for scheduling of equipment, access to rooms or the servicing of vehicles
- Central control for managing key usage, reporting on key usage, mileage and utilisation statistics.

Easy to use management reports provide quick and detailed information about who has accessed which keys, or used what equipment, and when it was returned, providing a full audit of user activity. Traka brings accountability and traceability to the users, resulting in an increased sense of ownership and responsibility such that there is less damage and reduced operating costs.

As used by organisations such as:

- Local Authorities for Fleet Vehicles
- Police Forces & Emergency Services
- Prisons & Secure Units
- Hospitals, Libraries and Schools
- Distribution Centres
- Central Government
- Engineering Works
- Haulage & Fleet Transportation
- Casinos
- Financial Institutions
- Mining & Oil Industries
- Car Dealerships
