

## Laptops, PDAs, memory sticks and other mobile computing devices containing sensitive data need to be controlled, audited and managed – how do you achieve this?

### Traka electronic lockers and proven key management make it very easy.

Does your organisation need to ensure that laptops, PDAs, memory sticks and other mobile computing equipment containing sensitive data is controlled, accounted for and perhaps even prevented from leaving the building?

Traka intelligent lockers come in a variety of sizes and solve organisational issues by firstly controlling who can gain access to equipment, and then secondly with RFID tagging, auditing if and when the asset was taken. All managed simply through our Traka32 Software running on a central PC.

Each asset is fitted with a unique RFID tag. Software controls if (and when) a pre-assigned user can access one item, some, or all of the equipment; and records what equipment is in or out, when a locker door is opened and by whom, and exactly when an asset is removed and returned.

If a user tries to return an asset to the wrong locker, the system will direct them to the correct one.

In addition, on returning equipment, the user can automatically report any faults or problems via the locker's keypad.

All this information can be seen on screen – and graphical reports generated – immediately, prompting appropriate management action.

Memory sticks are best managed by being securely attached to a Traka iFob and controlled through a Traka key management system, which offers the same level of access control and audit information.

### Traka intelligent key management solutions

Managing keys for equipment, buildings, rooms and even vehicles, Traka provides a unique asset control and fully audited key management solution.

Interfacing with almost all existing access control systems, Traka provides a robust and proven solution; preventing staff from taking equipment off-site without prior authorisation, and helping your organisation maintain security over sensitive data.

### And it's not just about accessing equipment – with Traka you can...

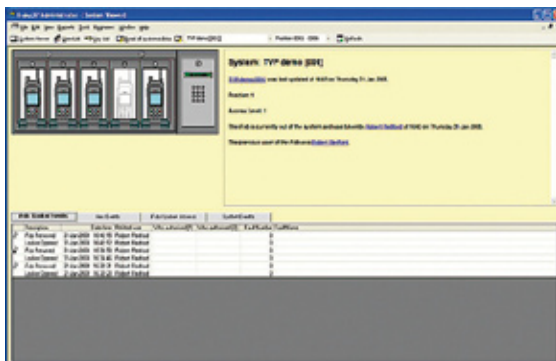

- Restrict the times when a user can access the asset (link this to staff shift patterns, weekend working or restricted hours)
- Determine how long the equipment can be out of the locker and in use (curfew)
- Set an alarm to trigger if the equipment is not returned after a pre-determined period of time.
- Enforce recalibration and service intervals – and lock in equipment so no one can take it out before you collect or service it
- Automatically charge equipment via a built in docking station – and ensure only fully-charged units are withdrawn.

# Any solution is only as good as the benefits it brings to your organisation

## With a Traka solution you get these benefits

- Flexible solution – highly scalable: multiple sets of lockers can be configured
- Local or remote – multiple locker configurations can be networked remotely.
- Simple control – a single PC can control the entire configuration
- Easy to manage – sophisticated yet easy to use management reporting
- Secure access – users identify by PIN, swipe card, proximity reader or biometrics
- Fast to trace – know instantly who has a piece of equipment or who used it, historically
- Know who to contact – embed details: display contact numbers for each user
- Audit damage – set up fault codes to record user damage or equipment faults
- Manage expiry – set calibration or service intervals: lock out units when expired
- Generate reports – confirm user activity, monitor utilisation, identify faulty units
- Expert installation – dedicated UK-based engineers and project managers
- Full user training – on-site initial customer training and refresher training at Traka
- Grows with your business – fully scalable solution, can extend to thousands of units.

Know instantly: who took an asset and when; when they returned it; and record any reported damage.

Lock out any damaged units, automatically notify managers, and schedule servicing or repairs.

Optionally, prevent a user leaving a building without first returning all equipment assigned to them.

Traka intelligent keyless lockers encourage personal accountability for equipment used, reduce carelessness, increase productivity and can reduce damage and operational costs significantly.
