

Traka Touch

Intelligent touch screen key management

- Keys are readily available 24/7, but to authorised users only
- Standalone 'plug&play' system with embedded Windows® software
- Full audit capability, retains a complete history of all key and user transactions
- Quick on-screen search for keys that are 'out of system'
- View reports directly on screen or export via USB port
- Interface available in over 10 languages
- No network connection, PC or external database required
- Fast to configure and easy to use

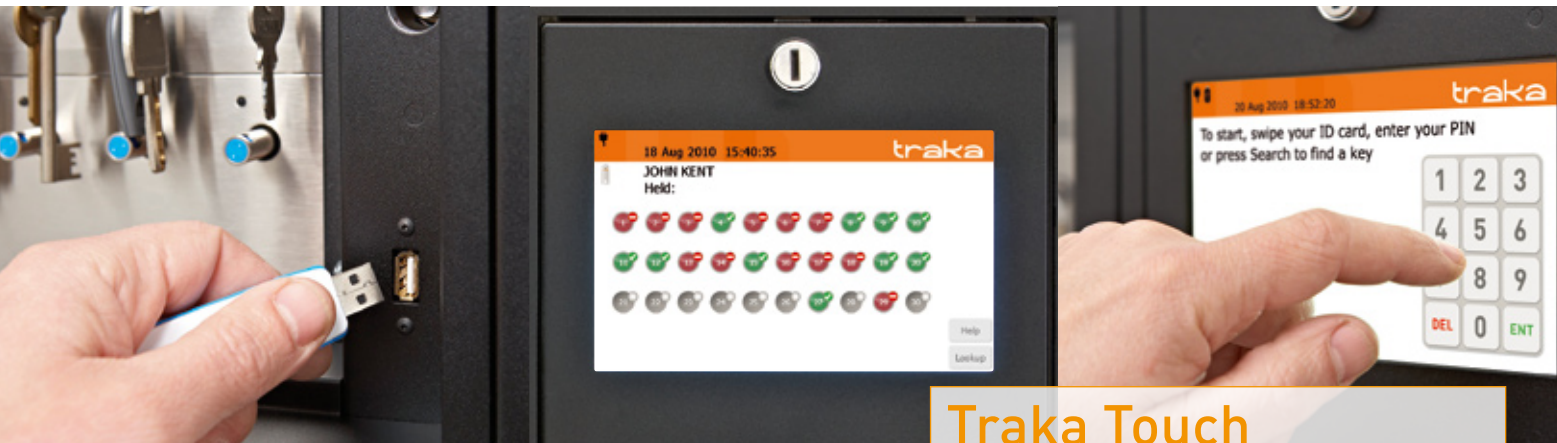

Traka Touch is the newest addition to our range of integrated key management solutions, and it's probably the most exciting development we've made in years – incorporating a 7" touch sensitive screen and using the latest embedded-processing technology.

Put simply, when it comes to key management Traka Touch makes your life easier. It gives you an intelligent 'out of the box' key management solution which operates entirely independently of your IT systems. Everything is managed via the touch screen on the front panel, from the initial administrative set up of users and keys, right through to the day to day user access.

Customer comment

"With Traka Touch we have been able to quickly and easily improve our key management at store level. We are planning to install a system at every one of our stores throughout the UK. It's a brilliantly simple but effective solution which makes efficient key management incredibly straightforward for both staff and managers. What's more, because it's stand alone, it is easy to deploy locally without having to involve staff from the corporate IT team or head office"

Traka Touch

What is Traka Touch?

Traka Touch is a sophisticated key management system which has the intelligence built in. And because it's a standalone solution, there's no need for a connection to your IT network and no server requirement to manage the database. Everything you need is embedded in the unit, so all you have to do is plug it in. Full audit capability of all key transactions is retained within the system using internal solid state memory and memory card.

Traka Touch at a glance

Traka Touch makes keys readily available, but to authorised users only.

Gives you control over who can use your keys, with access levels designated for each particular user.

Each user must identify themselves at the cabinet using a PIN code, or optionally a swipe card, or by biometric recognition.

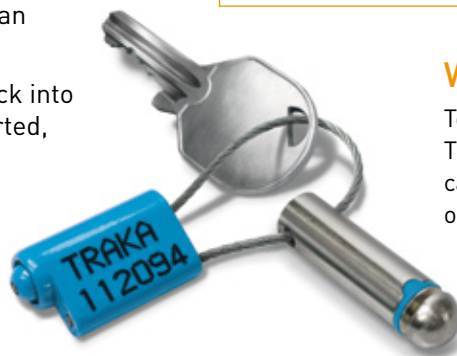

To remove any ambiguity, LEDs indicate which keys a user can and can't take when they access the cabinet.

Searching for an 'out of system' key is easy and Traka Touch will indicate who took it and when.

Reporting functions enable user transactions to be displayed on the screen so that you can quickly see a complete report of all key usage between specified times and dates. Great if you need to know who accessed the store room out of hours last Friday, or who was driving the delivery van two weeks ago!

For printed reports, simply plug a USB memory stick into the unit and your report will be automatically exported, ready for use on a PC.

With its touch screen technology and embedded processing, Traka Touch gives you all the key management capability that you require, but without the need for any complex integration with your IT systems.

TECHNICAL OVERVIEW

- Full colour 7" touch screen
- Embedded Windows CE and SQL Server database 
- Interface available in 10+ languages
- Solid state memory holds 250,000+ events
- USB port for import/export of reports via memory stick
- Automatic data back-up to removable SD card
- Easy access via PIN code or optionally via card reader or biometrics recognition
- Voice synthesized help facility
- Key sets managed per cabinet – 20 (standard) or 30 (optional)
- Built-in battery backup with charge status icon
- Soft close-down with no data loss in the event of long term power failure
- Clear polycarbonate door (standard), or metal door (optional)
