

Intelligent Keyless Lockers

for controlling and auditing access to equipment,
generating management information and much more...

Traka electronic lockers make it easy.

Traka intelligent lockers solve organisational issues by firstly controlling who can gain access to any equipment and then secondly, with RFID tagging, auditing if and when an asset is taken.

It's all managed through our Traka32 Software running on a central Windows PC.

Traka lockers are software controlled. Each asset is fitted with a tiny unique RFID tag. Software controls if, and when, a pre-assigned user can access one, some, all, or none of the equipment; if the locker door was opened and exactly when the asset was removed.

Traka software audits the information, along with when the asset was returned. And if you try to return it to the wrong locker – it tells you where to move it to!

Graphical reports quickly identify what equipment is in or out of each locker, when it was used, by whom, and when it was returned. Additionally, any faults or problems reported by the user when the equipment is returned can immediately be seen on screen, prompting appropriate management action.

Traka lockers come in a variety of sizes and are adapted to meet a wide range of customer requirements. They can house laptops, data memory sticks, PDAs, attack alarms, security radios, weapons, PAVA spray, breathalyzers, cash trays, medical equipment, even specialist tools – in fact almost anything that you need to manage and monitor effectively in your organisation.

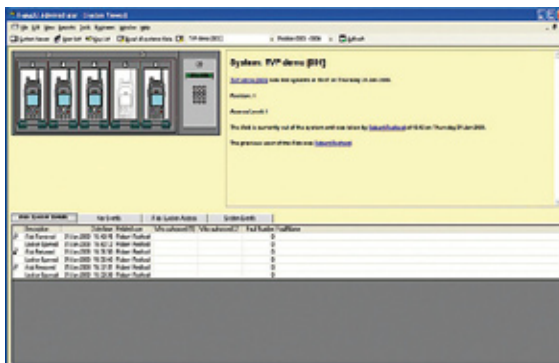

And it's not just about accessing equipment...

- Enforce recalibration and service intervals
- Download data and automatically charge units via a built in docking station
- Ensure only fully-charged units can be withdrawn
- Reserve an asset (so no one can take it out before you go to collect it)
- Restrict the times when a user can access the asset (link this to staff shift patterns, weekend working or restricted hours)
- Determine how long the equipment can be out of the locker and in use (curfew)
- Set an alarm to trigger if the asset is not returned after a pre-determined period of time
- Lock out faulty or damaged equipment until it is serviced or repaired
- Identify equipment with a fault history

Any solution is only as good as the benefits it brings to your organisation

With a Traka solution you get these benefits

- Flexible solution – highly scalable; multiple sets of lockers can be configured
- Local or remote – multiple locker configurations can be remotely networked
- Simple control – a single windows PC can control the entire configuration
- Easy to manage – sophisticated yet easy to use management reporting
- Quick to access – users identify by PIN, swipe card, proximity reader or biometrics
- Fast to trace – know instantly who has every asset or who used each asset historically
- Know who to contact – imbed details; display contact numbers for each user
- Audit damage – set up fault codes to record user damage or equipment faults
- Manage expiry – set calibration or service intervals; lock out units when expired
- Generate reports – confirm user activity, monitor utilisation, identify faulty units
- Expert installation – dedicated UK based engineers and project managers
- Full user training – on-site initial customer training and refresher training at Traka
- Grows with your business – fully scalable solution, can extend to thousands of units.

Traka intelligent keyless lockers encourage personal accountability for equipment used, reduce carelessness, increase productivity and can reduce damage and operational costs significantly.

Know instantly who took an asset and when; know when they returned it, and record if it was reported damaged.

Lock out any damaged units; automatically notify managers and schedule servicing or repair.
