

#### Traka Alert

Item Removed: Grand Master Key  
John Doe 9/18/2017 7:28PM

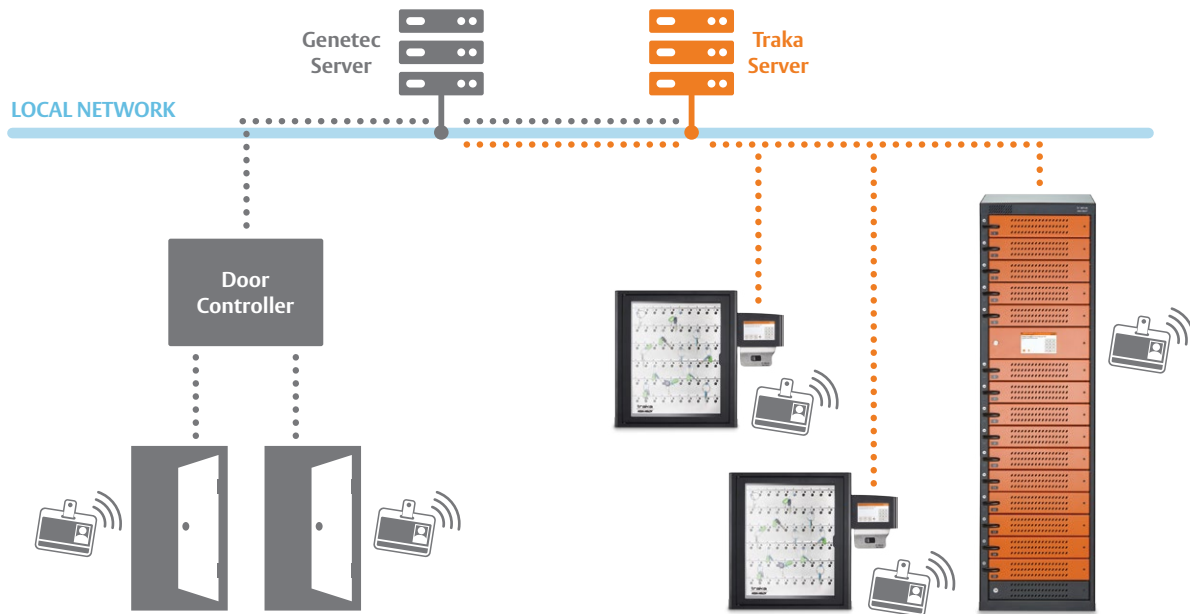

Now your Genetec system can manage access to your business keys and physical assets, such as laptops, tablets, radios, PDAs and weapons, in addition to your access control and other integrated systems

With our latest integration to Genetec Security Center, Traka gives you seamless day-to-day operation of our key and asset management solutions. Administrators can now automatically enroll Genetec cardholders into the Traka database, assign Access Rules for access to Traka cabinets and lockers, and receive Traka events and alarms back into Genetec Security Center for centralized control.

For integrated enterprise-level organizations, our Genetec integration gives you the regionalization necessary for effective and efficient management, without adding any burden to your global, top-level security administration. Traka puts total control right where you need it, giving your keys and assets the potential to help drive your most critical processes.

## Benefits

- Single credential used for both door access and keys/assets secured by Traka
- Seamless integration allows Traka system administration from familiar Genetec environment
- Automated Cardholder enrollment
- Define Traka user permissions based on Genetec Access Rules
- Significant reduction in administration overhead
- Complete data integrity between Traka and Genetec
- Individual and group-level updates to the Traka system in real time
- Traka events and alarms exposed to Genetec Security Center in real time
- Control of Cardholder's facility access permissions based on Traka item status – for example, employees cannot leave a facility prior to returning keys to the Traka cabinet

**Integration System Diagram**

The above diagram illustrates a simple, yet powerful integration at a single facility, but Traka can also be deployed on a global scale. The Traka Integration Engine can operate over a wide area network to centralize the administration of numerous locations around the world, for a **truly integrated solution**.

Organizations can now extend their access control functionality by directly tying Cardholder identities to any number of physical assets, like keys, devices and vehicles. When doing so, Genetec extends the reach of your access control, and Cardholders now become fully accountable for items they have checked out. This results in less loss, less damage and less time spent managing those assets.

Traka adds asset control to your existing access control system, to drive critical processes and make your keys and assets work for your business like never before. Call us today to learn how **Traka will customize the perfect management strategy for your organization**.

### System Requirements

- Genetec Security Center v5.6
- Supported platforms: Windows Server 2008, 2012, 2016, Windows 7, 8 and 10
- Traka Web administration software 2.9.94.9+ or Traka32 administration software 2.32+
- Traka Integration Engine Suite 2.0.14+ (facilitates integration with Genetec Security Center)
- Microsoft .Net Framework 4.6.1+
- Traka Genetec Integration v2.0.0+
- SQL Server (2008, 2012, 2014, 2016) to host Traka Web or Traka32 SQL database
- Traka Realtime Update Service 2.11+ for checking external authorizations when user leaves the building
- Dual-serial Ethernet device for each Traka cabinet (Traka32 system only)
