

## Healthcare solutions

Enhancing healthcare efficiency  
with intelligent solutions for managing devices,  
access control, technology and pharmacy services

# Security solutions for healthcare

Delivering safe, effective care in today's hospital and healthcare environments is already demanding, especially with limited budgets, resource pressures and ever-changing regulatory requirements. Managing physical access and equipment shouldn't be another challenge.

As technology continues to evolve rapidly, healthcare facilities must adapt and leverage the use of innovative technologies to meet changing demands and institute objectives.

**Traka's range of intelligent key and asset management solutions are trusted by over 80 NHS trusts across the UK. Our systems have been proven to reduce equipment loss time by up to 30%, minimising delays caused by misplaced or unavailable assets. This has helped enhance efficiency and deliver measurable return on investment.**

With smart, integrated control of medical devices, IT equipment, pharmacy access and staff access points, Traka helps healthcare teams streamline workflows, reduce risk and improve CQC compliance. This enables clinical and operational staff to stay focused on what matters most, delivery exceptional patient care.

*Clinical engineers can now devote more time to servicing vital equipment to ensure the best patient care using intelligent medical library lockers.*

## Medical device management

Know where it is and who took it, with real-time control

Hospitals, community and elderly care facilities manage millions of medical devices, each critical to patient care. Without the right systems in place, tracking, securing, and maintaining these assets is a daily challenge.

Traka's intelligent locker solutions provide secure, auditable access to healthcare teams with full control and visibility over who took what, when, and where. With passive RFID tags and RTLS integration, clinical engineers can reduce equipment loss, maintain uptime, and ensure devices are always ready for care.

Traka intelligent locker systems

## Technology

Protect data. Manage devices. Improve outcomes.

Managing shared mobile devices and IT assets across clinical and community settings is a growing challenge, particularly where electronic patient records (EPR) and sensitive data is at risk of exposure.

With Traka's device management locker solutions, healthcare facilities can gain full visibility and control over device usage, with audit-ready logs and configurable permissions that support digital transformation and compliance goals.

## Access control

Reliable key control for complex care settings

In mental health facilities, access and security are critical to safeguarding staff, patients, and visitors. With rising numbers of temporary and agency staff, it becomes complex to maintain strict control over high-security keys such as medication rooms and seclusion wards.

Traka ensures keys stay within controlled zones, with dual authorisation, audit trails, and time-limited access. Only authorised staff can access what they need, reducing risk and improving accountability and safety across the facility.

Traka Touch Pro key cabinets

## Pharmacy services

Safe, compliant and accountable drug access

Unreturned or misplaced drug keys can result to serious risks within hospital and ward environments, which can threaten both patient safety and regulatory compliance. Strict control of drug keys and distribution systems is critical to reducing these risks.

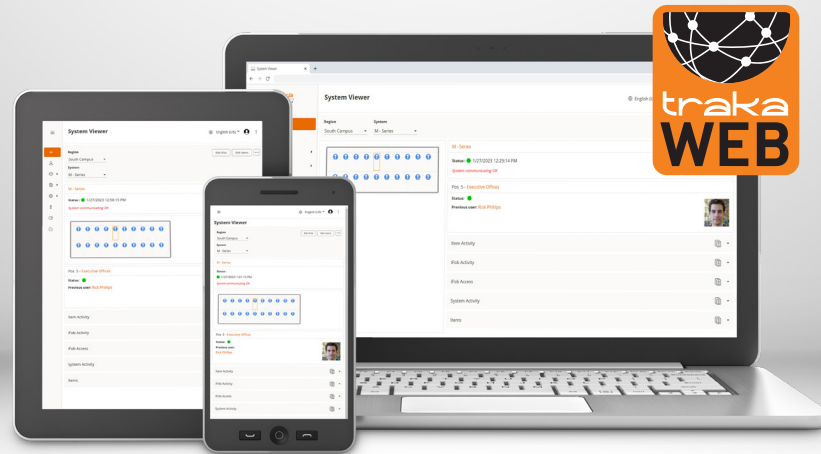

Traka's intelligent key management solutions support pharmacy teams with secure handovers, dual authorisation to help prevent unauthorised access, and ensuring controlled substances are properly managed across all shifts.

# TrakaWEB administration software

Streamlined process. Powerful insights. Total administration.

traka  
ASSA ABLOY

TrakaWEB goes beyond simply managing, it gives businesses the tools to streamline and enhance the daily processes related to physical keys, vehicles, devices and equipment.

Dozens of customisable software features enable administrators to automate and enforce unique security protocols, minimising the risk of human error and eliminating the need of manual oversight.

Whether managing a single key cabinet or thousands of systems across an enterprise network, TrakaWEB gives organisations the intelligent tools required for flexible, efficient, and effective management.

The data recorded at each transaction provides valuable insight into business operations, with the opportunity to create powerful new workflows through simple integrations.

Synchronise users  
and permissions

Leverage existing card  
or mobile credentials

Monitor Traka  
events and alarms

Use item status  
to grant/revoke access

## Integrated management with effortless administration

By integrating Traka with your existing personnel database, you can maintain a single source of truth for your user data and eliminate the need to manually add, remove, and update user profiles in multiple systems.

Define Traka access permissions based on job roles, access levels, or clearances, and ensuring your staff can access to the exact items they need with just a few clicks. They can then immediately start accessing your Traka systems using the same card or mobile credentials used for door access.

When you create, update, and deactivate users in your existing system, your Traka database is synchronised to keep user data accurate and current.

This means as you onboard new employees, their Traka user profiles are created automatically. When staff move to different roles or departments, their access permissions are updated accordingly. And when an employee is terminated, all access to Traka is revoked immediately.
