

Real Time Update Service (RTUS)

For asset return assurance

traka
ASSA ABLOY

Experience a safer and more
open world

Real Time Update Service (RTUS) provides real-time state change information from the Traka Touch system to the integration engine and through to a third party access control application.

This functionality can be used to confirm key/item return and removal in real-time giving you asset return assurance.

The significant benefit of asset return assurance means that together with third-party integrations, and access control software, you can grant/revoke access to premises based upon the current status of the keys/items held by the User.

This means that if your staff have not returned their keys and/or equipment when they come to exit the turnstile at the end of their shift, they will not be permitted to leave until they have returned the keys and/or equipment to the Traka system.

Real-time events that can be monitored in third-party access control applications such as C.Cure 9000, OnGuard, Symmetry etc. includes:

- What key/item has changed state
- What the new state is
- Who is accountable or responsible
- When the change occurred

Real Time Update Service (RTUS) works in conjunction with TrakaWEB Pro Plus, Traka Touch systems and Traka's Packaged Integrations.

The ASSA ABLOY Group is the
global leader in access solutions.
Every day we help people feel
safe, secure and experience a
more open world
