

Traka GO mobile administration

Powerful tools to master your property's keys

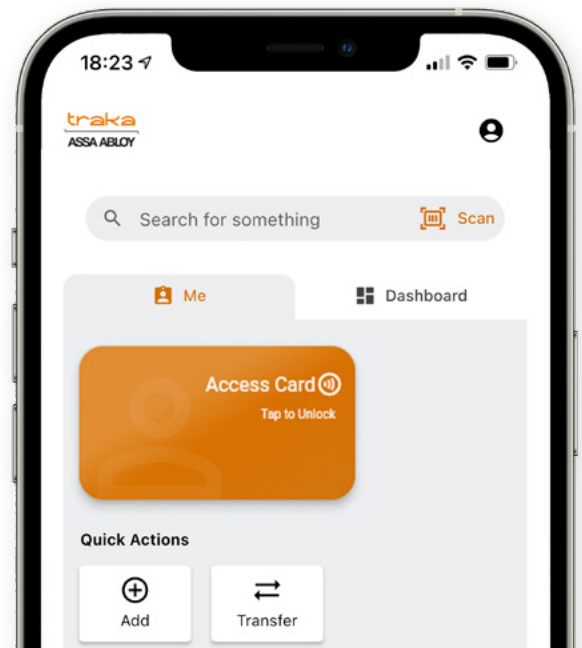

Centrally store and protect your keys, manage them from anywhere.

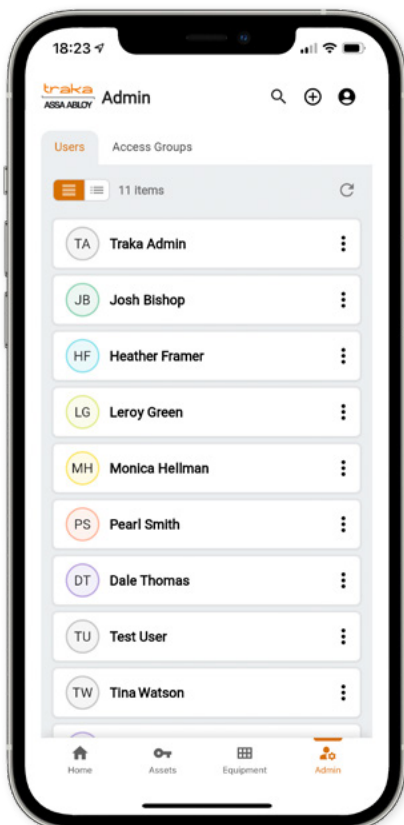

Your staff needs convenience and efficiency in accessing the keys they require each day. Traka GO brings all the powerful tools needed by users and administrators of your Traka system right to their smartphone.

Leasing agents and maintenance staff will no longer need to return to the cabinet to know if the key to a unit is available. They can identify who has an item checked out, contact them at the press of a button, make item reservations, and even transfer ownership of a key in the field.

With Traka GO, administrators can manage users and inventory with ease, check system and item status, view transaction history, and more.

Traka GO puts your entire key inventory in the palm of your hand!

Give administrators access to everything they need for efficient system management

- Receive instant notifications on important system activity
- Check current system and item status
- See transaction history
- Manage users and items
- Manage access permissions
- Create key reservations
- And more

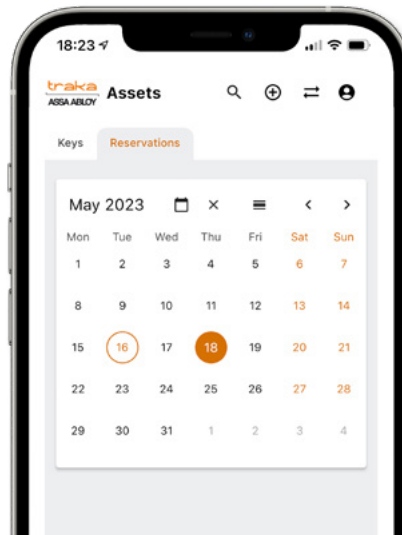

Transfer keys in the field
Allow authorized staff to transfer ownership of keys without returning them to the cabinet. In Traka GO, both users validate the transaction, and the system retains a complete chain-of-custody record to maintain accountability for keys, in and out of the cabinet.

Create asset reservations

Staff can quickly reserve items on a specific date and time to guarantee that keys are available when needed, such as a scheduled tour.

Scan for fast and secure key transactions

With keys needing to remain unlabeled for resident safety, they are easily identified by Traka GO via a unique QR code attached to each key. Users simply scan the code using their smartphone camera to quickly identify each key and to electronically document key transactions.

This function is especially helpful when performing bulk key checkouts for inspections or maintenance activities, where staff can scan to identify unit numbers or other important information in the field.
